

DCTC November 2022

DCTC Student Representative
Katelyn Masden

Cosmetology

Ms. Ewing's junior cosmetology students have been working with the Marcel stove iron and pressing comb.

This process was invented in 1872. That sounds like perfect throw back Thursday material!

NJROTC

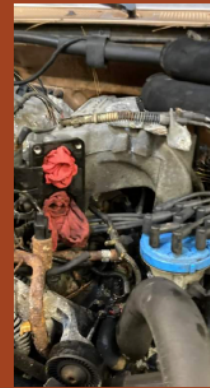

Very proud of our DCTC students who are members of the ROTC program at Easton High. They participated in the Veterans program last Wednesday evening and did a fantastic job honoring our local vets.

Auto Tech

Tyler Tyson adjusts the wheel bearing on a customer's truck after the class machined the brake rotor. Perdale Koger watches so he will understand the procedure.

Auto Tech students worked on a relic this week. Here is the Ford truck under the wrench. This was a throttle body removal to replace the sensor. They sure don't make them like this anymore.

PLTW - Biomedical

PLTW upperclassmen travelled to Chesapeake College, Wye Mills for their annual Healthcare Career Day. Students experienced first hand the nine program offerings at Chesapeake. In many of the rooms, students met alumnae from NDHS PLTW programs. Chesapeake instructors and students shared program expectations, how to be successful, career opportunities, potential growth and salary ranges.

PLTW - WHITE COAT CECEREMONY

Join us in congratulating our newest "White Coat" recipients from our Project Lead the Way Biomedical Science Program. These students are combining critical thinking and problem solving skills with cutting edge technologies to role play numerous different medical professionals in their high school classrooms. These experiences are ones that most students do not have until college. Be on the lookout in the next few years for these faces when you visit medical facilities. We can't wait to see the paths they chose and their successes along the way!

SkillsUSA Fall Leadership Conference

November 4th wrapped up the last day of Fall Leadership for DCTC

SkillsUSA students and teachers in Oven City, MD. They had a wonderful time attending leadership sessions and 18 members of our chapter earned their Statesman award.

Childhood Nutrition Day

"Don't yuck my yum!" That was the instruction at yesterday's food tasting in recognition of Childhood Nutrition Day, when SkillsUSA members from the Culinary and Teacher Academy of Maryland programs at DCTC helped introduce Sandy Hill Elementary students to new dishes. This was the fourth year DCTC students have put on this event, held in conjunction with the University of Maryland Extension Snap-Ed program and Mr. Nate Bratko, Educators Rising, and with the support of the American Culinary Federation.

Homeland Security

Check out what our senior Homeland security students have been up to! They are determining the area of convergence and the area of origin for a series of blood drops. This allows them to determine the path that each drop of blood traveled before it struck the wall.

FORENSIC SCIENCE

Forensic science students performed an excavation of a shoe box grave this week. It's important to be precise when locating and removing evidence.

STAFF SHOTOUTS

Ms. Cherie Robinson, teacher of the Teacher Academy of Maryland program at DCTC and advisor of Educators Rising with Chef Charlene Zinnel, teacher of the Culinary program at DCTC and advisor of SkillsUSA.

DCTC welcomed our Program Advisory Councils for their first meeting of the 2022-2023 school year. It was well attended by local industry members, fellow educators, current and past students and even representatives for local non-profits who all worked collaboratively to help our programs keep current with industry standards and new technologies. This group of professionals will meet throughout the school year to evaluate our programs to ensure we are producing program graduates who are ready for the workforce. Thank you council members for being willing to give back to DCTC!
